

Report on SDG6: Clean Water and Sanitation

Thaksin University, Thailand

6.3.1 Wastewater treatment

Thaksin University has a wastewater treatment system to treat wastewater from buildings and a budget plan to improve sewerage disposal, and our sewerage disposal is currently treated individually in septic tanks.

Wastewater treatment system for treating waste water wastewater from buildings

Thaksin university has installed high-quality wastewater treatment systems in every building to prevent wastewater from flowing into public water sources. Continuous monitoring and quality control of the wastewater are conducted before releasing it from the system.

Wastewater treatment not only ensures the safety of the university's water system but also helps preserve the environment and prevent pollution in the surrounding area.
